Newnes Communications Technology Handbook By Geoff Lewis

This volume provides an introduction to the huge range of topics and concepts encountered in the field of communications technology. Contents are ordered initially by communications system. The reader is then presented with an introduction to the topic followed by more detailed descriptions of each subject in alphabetical order. Every section contains an explanation of common terminology, and for those wishing to study an area in depth a list of further references is provided. This approach offers flexible access to information for a range of users. Those who know little about communications should find that the handbook provides a clear introduction. For experienced communications professionals the book constitutes a handy reference source and a way of finding out about related technologies. The book addresses an international audience by referring to all systems and standards throughout. It should appeal to communications and network managers, engineers, researchers, technicians and students.

Editorial Review

About the Author

Geoff Lewis has spent many years in most branches of engineering including: motor vehicles, aeronautical, communication, telecommunication, production - as an engineer, teacher, lecturer, technical author. Geoff has a keen interest in environmental engineering including hydropower generated inventions. He has written on most of the above subjects, including 10 books, many journal articles and given public lectures. Geoff has long appreciated that knowledge is never wasted and that learning is a life long adventure. He has been told on many occasions that he has the ability to express complex concepts in a fairly easily understandable manner - at least this attribute is at the back of his mind when writing.
