Programming Robots with ROS: A Practical Introduction to the Robot Operating System By Morgan Quigley, Brian Gerkey, William D. Smart

Want to develop novel robot applications, but don't know how to write a mapping or object-recognition system? You're not alone, but you're certainly not without help. By combining real-world examples with valuable knowledge from the Robot Operating System (ROS) community, this practical book provides a set of motivating recipes for solving specific robotics use cases.

Ideal for enthusiasts, from students in robotics clubs to professional robotics scientists and engineers, each recipe describes a complete solution using ROS open source libraries and tools. You'll learn how to complete tasks described in the recipes, as well as how to configure and recombine components for other tasks. If you're familiar with Python, you're ready to go.

- Learn fundamentals, including key ROS concepts, tools, and patterns
- Program robots that perform an increasingly complex set of behaviors, using the powerful packages in ROS
- See how to easily add perception and navigation abilities to your robots
- Integrate your own sensors, actuators, software libraries, and even a whole robot into the ROS ecosystem
- Learn tips and tricks for using ROS tools and community resources, debugging robot behavior, and using C++ in ROS

Editorial Review

About the Author

Morgan Quigley is a cofounder of the Open Source Robotics Foundation (OSRF), which develops and maintains the Robot Operating System (ROS). He came to OSRF after receiving a PhD in computer science at Stanford University, where he created one of the ancestors of ROS as part of the Stanford AI Robot (STAIR) project in 2006 and 2007. As it became clear that the future of robotics software was in collaborative development, this effort led him to cofound the ROS project with many other engineers. His research interests include robot software systems, open source software and firmware, embedded systems design, mechatronics, and sensor design.

Brian Gerkey is cofounder and CEO of OSRF. Prior to joining OSRF, he was Director of Open Source Development at Willow Garage. Previously, Brian was a Computer Scientist in the Artificial Intelligence Center at SRI, and before that, a postdoctoral research fellow in the Artificial Intelligence Lab at Stanford University. Brian received his PhD in computer science from the University of Southern California (USC) in 2003, his MS in computer science from USC in 2000, and his BSE in computer engineering, with a secondary major in mathematics and a minor in robotics and automation, from Tulane University in 1998. Since 2008, he has worked on the ROS Project, which develops and releases one of the most widely used robot software platforms in robotics research and education (and soon industry). He is founding and former lead developer on the open source Player Project, which continues to maintain widely used robot simulation and development tools.

Bill Smart is an associate professor at Oregon State University, where he codirects the Robotics program. His research interests span the areas of mobile robotics, machine learning, human–robot interaction, and the interaction between robotics and the law. Bill has been writing software for robots for over two decades, and doing active research and development of robot software architectures for over 15 years. At Oregon State University, he codirects the Robotics program and teaches classes in robotics and computer programming at both the undergraduate and graduate levels. He has been a ROS user since the beginning and was involved in some of the early planning workshops for the system. In 2010–11, he spent a 15-month sabbatical at Willow Garage, developing software for PR2 robots and enjoying the weather in California.

Users Review

From reader reviews:

Becky Pope:

Why don't make it to become your habit? Right now, try to ready your time to do the important work, like looking for your favorite publication and reading a guide. Beside you can solve your trouble; you can add your knowledge by the book entitled Programming Robots with ROS: A Practical Introduction to the Robot Operating System. Try to make book Programming Robots with ROS: A Practical Introduction to the Robot Operating System as your friend. It means that it can being your friend when you feel alone and beside those

of course make you smarter than before. Yeah, it is very fortunate to suit your needs. The book makes you far more confident because you can know everything by the book. So, we need to make new experience and also knowledge with this book.

Roberto Fetter:

Spent a free time to be fun activity to accomplish! A lot of people spent their down time with their family, or their particular friends. Usually they doing activity like watching television, likely to beach, or picnic within the park. They actually doing same task every week. Do you feel it? Do you need to something different to fill your free time/ holiday? Could possibly be reading a book is usually option to fill your totally free time/ holiday. The first thing you will ask may be what kinds of guide that you should read. If you want to try out look for book, may be the publication untitled Programming Robots with ROS: A Practical Introduction to the Robot Operating System can be excellent book to read. May be it is usually best activity to you.

Diane Gonzales:

A lot of people always spent their particular free time to vacation or even go to the outside with them loved ones or their friend. Did you know? Many a lot of people spent they will free time just watching TV, or playing video games all day long. If you need to try to find a new activity that's look different you can read any book. It is really fun for you. If you enjoy the book that you simply read you can spent 24 hours a day to reading a book. The book Programming Robots with ROS: A Practical Introduction to the Robot Operating System it is very good to read. There are a lot of people who recommended this book. These were enjoying reading this book. If you did not have enough space to create this book you can buy typically the e-book. You can more easily to read this book from your smart phone. The price is not to fund but this book provides high quality.

Mary Hubbard:

A lot of e-book has printed but it is different. You can get it by net on social media. You can choose the top book for you, science, amusing, novel, or whatever simply by searching from it. It is named of book Programming Robots with ROS: A Practical Introduction to the Robot Operating System. You can include your knowledge by it. Without making the printed book, it could add your knowledge and make anyone happier to read. It is most critical that, you must aware about reserve. It can bring you from one destination for a other place.
