Practical Design Calculations for Groundwater and Soil Remediation, Second Edition By Jeff Kuo

Includes Illustrative Applications of Practical Design Calculations

Written in a straightforward style and user-friendly format, **Practical Design Calculations for Groundwater and Soil Remediation, Second Edition** highlights the essential concepts and important aspects of major design calculations used in soil and groundwater remediation. Drawing from the author's teaching and consulting experience, this text provides practical information that addresses the current needs of practicing engineers, scientists, and legal experts in the field.

What's New in This Edition:

This latest edition covers important aspects of major design calculations as well as practical and relevant working information for groundwater and soil remediation. Realistic examples are used liberally to illustrate the applications of the design calculations. Many examples are designed to assist the readers in building the right concepts.

The text begins with an introductory chapter; it then illustrates the engineering calculations needed during site assessment and remedial investigation. It continues with a discussion on plume migration in soil and groundwater. It then covers the mass-balance concept, reaction kinetics, and types, configurations, and sizing of reactors. The author incorporates important design calculations for commonly used *in situ* and *ex situ* soil and groundwater remediation technologies, such as soil venting, air sparging, air stripping, bioremediation, and chemical oxidation, and off-gas treatment technologies. He also presents design

calculations for capture zone and optimal well spacing.

- Includes both SI and US customary units, as well as unit conversions
- Presents examples that directly follow the design equations
- Provides discussion that assists engineers in building proper concepts

Practical Design Calculations for Groundwater and Soil Remediation, Second Edition also serves as a reference or textbook for students dedicated to the study of site remediation.
