Food Materials Science and Engineering By Bhesh Bhandari

Food Materials Science and Engineering covers a comprehensive range of topics in relation to food materials, their properties and characterisation techniques, thus offering a new approach to understanding food production and quality control.

The opening chapter will define the scope and application of food materials science, explaining the relationship between raw material structure and processing and quality in the final product. Subsequent chapters will examine the structure of food materials and how they relate to quality, sensory perception, processing attributes and nutrient delivery. The authors also address applications of nanotechnology to food and packaging science. Methods of manufacturing food systems with improved shelf-life and quality attributes will be highlighted in the book.

Editorial Review

From the Back Cover

Food materials science combines food physics, food chemistry and food processing and engineering into a single domain. Materials science involves the interdisciplinary study of the properties and behaviours of materials, and is a relatively new approach in the food and agricultural commodities sector. Its importance is increasingly recognised, however, driven by advances in disciplines such as polymer and biomedical sciences. The availability of many advanced material characterisation techniques, and the improved affordability of the required equipment, widens research possibilities in this area.

Food Materials Science and Engineering looks at new techniques which can be used in the food industry to add value to food materials, ingredients and foods. Adding value to food materials is of vital commercial importance to the modern food industry as it seeks to meet consumer satisfaction, food safety and nutrient delivery in a rapidly advancing environment. The materials science approach has the potential to surpass traditional food science techniques in studying the structure and behaviour of food at the macro-, micro- and nano-levels, as well as developing our understanding of how nutrients are released and delivered. It is thought that this new approach will lead to improvements in the quality, shelf life and nutritional value of food products as well as offering the potential to develop new generation of products.

This book will be invaluable in helping students and food scientists to understand the practical applications of materials science to food and biological materials. It introduces the historical background of the materials science and its relevance to food materials science, from the molecular basis upwards. Food materials properties, processing and performance are covered in depth, with reference to microstructures and sensory properties. The book also includes chapters on cutting edge topics, including phase transitions and the application of nanotechnology to food and food packaging.

About the Author

Bhesh Bhandari is Professor of Food Processing Technology and Engineering in the School of Agriculture and Food Sciences, at the University of Queensland, Australia.

Yrjö H. Roos is Professor of Food Technology in the School of Food and Nutritional Sciences, at University College Cork, Ireland.

Users Review

From reader reviews:

Deborah Hagan:

Book is to be different for each grade. Book for children till adult are different content. We all know that that book is very important for people. The book Food Materials Science and Engineering was making you to know about other expertise and of course you can take more information. It is very advantages for you. The reserve Food Materials Science and Engineering is not only giving you considerably more new information but also to get your friend when you sense bored. You can spend your own personal spend time to read your

book. Try to make relationship with all the book Food Materials Science and Engineering. You never sense lose out for everything when you read some books.

Mary Gilbert:

In this 21st hundred years, people become competitive in each way. By being competitive currently, people have do something to make these individuals survives, being in the middle of typically the crowded place and notice simply by surrounding. One thing that at times many people have underestimated that for a while is reading. Yes, by reading a book your ability to survive enhance then having chance to remain than other is high. To suit your needs who want to start reading some sort of book, we give you this kind of Food Materials Science and Engineering book as beginner and daily reading publication. Why, because this book is more than just a book.

Latonya Sams:

This Food Materials Science and Engineering is new way for you who has fascination to look for some information as it relief your hunger of knowledge. Getting deeper you onto it getting knowledge more you know otherwise you who still having small amount of digest in reading this Food Materials Science and Engineering can be the light food to suit your needs because the information inside this particular book is easy to get by simply anyone. These books develop itself in the form which can be reachable by anyone, yes I mean in the e-book application form. People who think that in e-book form make them feel drowsy even dizzy this e-book is the answer. So there isn't any in reading a e-book especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss this! Just read this e-book type for your better life as well as knowledge.

Lisa Saxon:

Within this era which is the greater person or who has ability in doing something more are more precious than other. Do you want to become one among it? It is just simple method to have that. What you are related is just spending your time not very much but quite enough to possess a look at some books. Among the books in the top listing in your reading list is usually Food Materials Science and Engineering. This book which is qualified as The Hungry Mountains can get you closer in growing to be precious person. By looking upward and review this publication you can get many advantages.
