Diseases of the Nervous System By Harald Sontheimer

The study of the brain continues to expand at a rapid pace providing fascinating insights into the basic mechanisms underlying nervous system illnesses. New tools, ranging from genome sequencing to non-invasive imaging, and research fueled by public and private investment in biomedical research has been transformative in our understanding of nervous system diseases and has led to an explosion of published primary research articles.

Diseases of the Nervous System summarizes the current state of basic and clinical knowledge for the most common neurological and neuropsychiatric conditions. In a systematic progression, each chapter covers either a single disease or a group of related disorders ranging from static insults to primary and secondary progressive neurodegenerative diseases, neurodevelopmental illnesses, illnesses resulting from nervous system infection and neuropsychiatric conditions. Chapters follow a common format and are stand-alone units, each covering disease history, clinical presentation, disease mechanisms and treatment protocols. Dr. Sontheimer also includes two chapters which discuss common concepts shared among the disorders and how new findings are being translated from the bench to the bedside. In a final chapter, he explains the most commonly used neuroscience jargon. The chapters address controversial issues in current day neuroscience research including translational research, drug discovery, ethical issues, and the promises of personalized medicine.

This book provides an introduction for course adoption and an introductory tutorial for students, scholars, researchers and medical professionals interested in learning the state of the art concerning our understanding and treatment of diseases of the nervous system.

- 2016 PROSE Award winner of the Best Textbook Award in Biological & Life Sciences
- Provides a focused tutorial introduction to the core diseases of the nervous system
- Includes comprehensive introductions to Stroke, Epilepsy, Alzheimer's Disease, Parkinson's Disease, Huntington's Disease, ALS, Head and Spinal Cord Trauma, Multiple Sclerosis, Brain Tumors, Depression, Schizophrenia and many other diseases of the nervous system

- Covers more than 40 diseases from the foundational science to the best treatment protocols
- Includes discussions of translational research, drug discovery, personalized medicine, ethics, and neuroscience

Editorial Review

Review

"...a unique volume that outlines the principal clinical features of all the major neurological and psychiatric diseases while simultaneously discussing the current understanding of the basic science of these disorders...I also would recommend the publication as one that will offer useful insights on disease to all graduate students in neuroscience and it is likely to be helpful to clinicians being trained in neurology and psychiatry."

--The Quarterly Review of Biology

"... a comprehensive summary of the essentials of the most common neurological and neuropsychiatric disorders. The author highlights both the history and the progress in our understanding. Score: 80 - 3 Stars"

--Doody's

From the Back Cover

The study of the brain continues to expand at a rapid pace providing fascinating insights into the basic mechanisms underlying nervous system illnesses. New tools, ranging from genome sequencing to non-invasive imaging, and research fueled by public and private investment in biomedical research has been transformative in our understanding of nervous system diseases and has led to an explosion of published primary research articles. *Diseases of the Nervous System* summarizes the current state of basic and clinical knowledge for the most common neurological and neuropsychiatric conditions. In a systematic progression, each chapter covers either a single disease or a group of related disorders ranging from static insults to primary and secondary progressive neurodegenerative diseases, neurodevelopmental illnesses, illnesses resulting from nervous system infection and neuropsychiatric conditions. Chapters follow a common format and are stand-alone units, each covering disease history, clinical presentation, disease mechanisms and treatment protocols. Dr. Sontheimer also includes two chapters which discuss common concepts shared among the disorders and how new findings are being translated from the bench to the bedside. In a final chapter, he explains the most commonly used neuroscience jargon. The chapters address controversial issues in current day neuroscience research including translational research, drug discovery, ethical issues, and the promises of personalized medicine.

This book provides an introduction for course adoption and an introductory tutorial for students, scholars, researchers and medical professionals interested in learning the state of the art concerning our understanding and treatment of diseases of the nervous system.

About the Author

Dr. Sontheimer is a researcher and educator with a life-long interest in Neuroscience. A native of Germany, he obtained a Masters degree in evolutionary comparative Neuroscience, where he worked on the development of oculomotor reflexes. In 1989, he obtained a doctorate in Biophysics and Cellular & Molecular Neuroscience from the University of Heidelberg studying biophysical changes that accompany the development of oligodendrocytes, the principle myelinating cells of the nervous system. He moved to the United States, where he later became a citizen, for post-doctoral studies at Yale University. His independent research career began at Yale in 1991 and continued at the University of Alabama Birmingham from 1994-2015, and, more recently at Virginia Tech. His research focuses on the role of glial support cells in health and disease. His laboratory has made major discoveries that led to two clinical trials using novel compounds to treat malignant gliomas. His research led to over 170 peer-reviewed publications. For the clinical

development of his discoveries, Dr. Sontheimer started a biotechnologies company, Transmolecular Inc., which conducted both phase I and II clinical trials with the anti-cancer agent chlorotoxin. This technology was recently acquired by Morphotec Pharmaceuticals, who will be conducting the phase III clinical trials. As educator, Dr. Sontheimer has been active in teaching Medical Neuroscience, graduate Cellular and Molecular Neuroscience, and, for the past 10 years, he has offered both graduate and undergraduate courses on Diseases of the Nervous System. In 2005, Dr. Sontheimer became director of the Civitan International Research Center, a philanthropically supported center in Birmingham AL devoted to the study and treatment of children with developmental disabilities, ranging from Down's syndrome to Autism. In this capacity, Dr. Sontheimer was frequently tasked explaining complex scientific processes to a lay audience. Recognizing the need to further educate the public about neurological disorders using language that is accessible to an educated public motivated Dr. Sontheimer to write a textbook on Diseases of the Nervous system. To assure that the material is comprehensive yet readily understandable, he wrote large parts of this text while on sabbatical leave at Rhodes College in Memphis, where he taught undergraduates while testing his book on this group of talented third and fourth year Neuroscience students. In 2015 Dr. Sontheimer was tapped to found a School of Neuroscience at Virginia Tech with the goal to offer a unique Neuroscience education to an increasing number of undergraduates. As the first of its kind, this enterprise will ultimately represent an entire college dedicated to a variety of Neuroscience experiences and include majors in clinical, experimental, cognitive, systems, computational and social Neuroscience. Enrollment is expected to exceed 1000 undergraduate students. Dr. Sontheimer continues to manage a very active research laboratory at the Virginia Tech Carilion Research Institute where he involves a spectrum of trainees ranging from undergraduates to post-doctoral scientists. Dr. Sontheimer has already trained well over 50 Ph.D. students and post-doctoral fellows.

Users Review

From reader reviews:

Dan Maes:

Why don't make it to be your habit? Right now, try to ready your time to do the important action, like looking for your favorite book and reading a reserve. Beside you can solve your problem; you can add your knowledge by the book entitled Diseases of the Nervous System. Try to stumble through book Diseases of the Nervous System as your good friend. It means that it can being your friend when you feel alone and beside those of course make you smarter than ever before. Yeah, it is very fortunated to suit your needs. The book makes you much more confidence because you can know everything by the book. So , let me make new experience in addition to knowledge with this book.

Gerardo Whittaker:

Now a day people that Living in the era wherever everything reachable by match the internet and the resources in it can be true or not involve people to be aware of each facts they get. How people have to be smart in receiving any information nowadays? Of course the correct answer is reading a book. Reading through a book can help persons out of this uncertainty Information especially this Diseases of the Nervous System book because this book offers you rich data and knowledge. Of course the info in this book hundred per-cent guarantees there is no doubt in it you know.

Donna Johnson:

Information is provisions for individuals to get better life, information today can get by anyone on everywhere. The information can be a knowledge or any news even an issue. What people must be consider whenever those information which is in the former life are challenging be find than now could be taking seriously which one is suitable to believe or which one often the resource are convinced. If you have the unstable resource then you obtain it as your main information it will have huge disadvantage for you. All those possibilities will not happen inside you if you take Diseases of the Nervous System as your daily resource information.

Teresa Obannon:

Spent a free a chance to be fun activity to accomplish! A lot of people spent their sparetime with their family, or their friends. Usually they doing activity like watching television, going to beach, or picnic inside park. They actually doing same every week. Do you feel it? Would you like to something different to fill your own personal free time/ holiday? Might be reading a book is usually option to fill your free time/ holiday. The first thing you will ask may be what kinds of reserve that you should read. If you want to try out look for book, may be the publication untitled Diseases of the Nervous System can be good book to read. May be it can be best activity to you.
