Differential Geometry: Curves - Surfaces - Manifolds By Wolfgang Kühnel

Our first knowledge of differential geometry usually comes from the study of the curves and surfaces in $\mathbb{R}^3$ that arise in calculus. Here we learn about line and surface integrals, divergence and curl, and the various forms of Stokes' Theorem. If we are fortunate, we may encounter curvature and such things as the Serret-Frenet formulas. With just the basic tools from multi-variable calculus, plus a little knowledge of linear algebra, it is possible to begin a much richer and rewarding study of differential geometry, which is what is presented in this book. It starts with an introduction to the classical differential geometry of curves and surfaces in Euclidean space, then leads to an introduction to the Riemannian geometry of more general manifolds, including a look at Einstein spaces. An important bridge from the low-dimensional theory to the general case is provided by a chapter on the intrinsic geometry of surfaces. The first half of the book, covering the geometry of curves and surfaces, would be suitable for a one-semester undergraduate course. The local and global theories of curves and surfaces are presented, including detailed discussions of surfaces of rotation, ruled surfaces and minimal surfaces. The second half of the book, which could be used for a more advanced course, begins with an introduction to differentiable manifolds, Riemannian structures and the curvature tensor. Two special topics are treated in detail: spaces of constant curvature and Einstein spaces. The main goal of the book is to get started in a fairly elementary way, then to guide the reader toward more sophisticated concepts and more advanced topics. There are many examples and exercises to help along the way. Numerous figures help the reader visualize key concepts and examples, especially in lower dimensions.

Editorial Review

Review

From a review for the German Edition: The book covers all the topics which could be necessary later for learning higher level differential geometry. The material is very carefully sorted and easy to read. --

Mathematical Reviews

Users Review

From reader reviews:

Scott Padilla:

What do you concerning book? It is not important together with you? Or just adding material when you require something to explain what your own problem? How about your spare time? Or are you busy man or woman? If you don't have spare time to perform others business, it is make one feel bored faster. And you have free time? What did you do? All people has many questions above. They should answer that question since just their can do which. It said that about publication. Book is familiar in each person. Yes, it is right. Because start from on jardín de infancia until university need this specific Differential Geometry: Curves - Surfaces - Manifolds to read.

Vicky Gamez:

This book untitled Differential Geometry: Curves - Surfaces - Manifolds to be one of several books that will best seller in this year, this is because when you read this e-book you can get a lot of benefit into it. You will easily to buy that book in the book retail store or you can order it by means of online. The publisher in this book sells the e-book too. It makes you quickly to read this book, since you can read this book in your Touch screen phone. So there is no reason for you to past this book from your list.

Alexandra Stafford:

People live in this new time of lifestyle always attempt to and must have the spare time or they will get large amount of stress from both everyday life and work. So , if we ask do people have spare time, we will say absolutely indeed. People is human not really a huge robot. Then we question again, what kind of activity do you possess when the spare time coming to you actually of course your answer will probably unlimited right. Then ever try this one, reading books. It can be your alternative within spending your spare time, the particular book you have read is Differential Geometry: Curves - Surfaces - Manifolds.

Beverly Woods:

What is your hobby? Have you heard that will question when you got pupils? We believe that that question

was given by teacher for their students. Many kinds of hobby, Everybody has different hobby. And you also know that little person including reading or as examining become their hobby. You must know that reading is very important along with book as to be the point. Book is important thing to include you knowledge, except your own personal teacher or lecturer. You get good news or update with regards to something by book. Numerous books that can you go onto be your object. One of them is actually Differential Geometry: Curves - Surfaces - Manifolds.
